An equation (or a system of equations) in so many variables has  
a solution set  $S$  which is a subset of the universe  $\Omega$  for which the  
equations make sense. When there are no solutions we write  $S =$   
 $\emptyset$ . A statement as  $(x_1, x_2, \dots, x_n) \in \emptyset$  seems pretty forlorn to  
me. - Christian Blatter Nov 20 '14 at 20:22

## notation - When an equation has no solutions, denote it

...

When finding how many solutions an equation has you need to  
look at the constants and coefficients. The coefficients are the  
numbers alongside the variables. The constants are the numbers  
alone with no variables. If the coefficients are the same on both  
sides then the sides will not equal, therefore no solutions will  
occur.

From a logical point of view it is quite legitimate to call all symbols of this kind variable symbols, as is customary in mathematical logic (the "domain of variation" of the variable may prove to consist of a single object; it may even be "empty" — e.g. in the case of equations with no solutions). Further examples of this kind of signs are:

Purplemath. You never know when set notation is going to pop up. Usually, you'll see it when you learn about solving inequalities, because for some reason saying " $x < 3$ " isn't good enough, so instead they'll want you to phrase the answer as "the solution set is  $\{ x \mid x \text{ is a real number and } x < 3 \}$ ". How this adds anything to the student's understanding, I don't know.
